

Tested and authorized by PCS-Innotec®

Tested according to IAM155 / DIN53283 or released on the basis of certificate DIBT Z10.8-483 or KOMO 21000-21.

The material types listed in this table were tested by PCS Innotec and released for façade mounting by means of the Innotec Project Gluing System. An expected service life of at least xx years may only be assumed if the processing and environmental conditions described in detail in the accompanying installation instructions are observed correctly and in full.

Authorized substrates and facade panels				Preparation requirements (observe installation instructions)					
Authorization									
Brand name	Type			Number	Date	Clean with	Sand	Prime with	Remarks

This version replaces all previous versions. Please always consult your personal Innotec Project advisor for the most current overview.

This overview has been prepared with the greatest possible care and based on material samples obtained from the market. It should therefore be interpreted as purely "informative". We recommend that you always verify at the start of your project whether the material qualities are the same and, if possible, always have new adhesion tests carried out.
